PRELIMINARY AMENDMENT

Commissioner for Patents:

Please amend the above-identified application as follows:

In the Specification:

Please replace the paragraph beginning at page 2, line 4, with the following rewritten paragraph:

With respect to data retrieving operations, packets received from a communication system or read from local storage are required to be de-packetized before processing by each respective data processor. The de-packetization process includes, first, detection of the sync-word, followed by verification of the packet ID, extraction of timing and necessary side information, determining the payload size and, finally, extraction and concatenation of the payload to reconstruct the data. The de-packetized data may be passed to a data processor for further processing. For example, the data processor for MPEG compressed audio data will be a corresponding MPEG audio decoder; furthermore, this audio decoder may be implemented using programmable DSP (Digital Signal Processor).
